Genetic summary

Genetic breed identification:

Shih Tzu

Breed ancestry:

Shih Tzu: 100.0%

Predicted adult weight: **13 lbs**

Calculated from 17 size genes.

Life stage: **Mature adult**

Based on date of birth provided.

Health Report

How to interpret Gracie's genetic health results:

If Gracie inherited any of the variants that we tested, they will be listed at the top of the Health Report section, along with a description of how to interpret this result. We also include all of the variants that we tested Gracie for that we did not detect the risk variant for.

A genetic test is not a diagnosis

This genetic test does not diagnose a disease. Please talk to your vet about your dog's genetic results, or if you think that your pet may have a health condition or disease.

Summary

Of the 273 genetic health risks we analyzed, we found 1 result that you should learn about.

Health Report

BREED-RELEVANT RESULTS

Research studies indicate that these results are more relevant to dogs like Gracie, and may influence her chances of developing certain health conditions.

	Congenital Hypothyroidism with Goiter (SLC5A5, Shih Tzu Variant)	Clear
	Intervertebral Disc Disease (Type I) (FGF4 retrogene - CFA12)	Clear
	Prekallikrein Deficiency (KLKB1 Exon 8)	Clear

Health Report

OTHER RESULTS

Research has not yet linked these conditions to dogs with similar breeds to Gracie. Review any increased risk or notable results to understand her potential risk and recommendations.

	Copper Toxicosis (Accumulating) (ATP7B)	Notable
	2-DHA Kidney & Bladder Stones (APRT)	Clear
	Acral Mutilation Syndrome (GDNF-AS, Spaniel and Pointer Variant)	Clear
	Alaskan Husky Encephalopathy (SLC19A3)	Clear
	Alaskan Malamute Polyneuropathy, AMPN (NDRG1 SNP)	Clear
	Alexander Disease (GFAP)	Clear
	ALT Activity (GPT)	Clear
	Anhidrotic Ectodermal Dysplasia (EDA Intron 8)	Clear
	Autosomal Dominant Progressive Retinal Atrophy (RHO)	Clear
	Bald Thigh Syndrome (IGFBP5)	Clear
	Bernard-Soulier Syndrome, BSS (GP9, Cocker Spaniel Variant)	Clear

HEALTH REPORT

Notable result

Copper Toxicosis (Accumulating)

Gracie inherited one copy of the variant we tested for Copper Toxicosis (Accumulating)

Gracie is not known to be at increased risk for Copper Toxicosis (Accumulating)

What does this result mean?

We do not know whether this increases the risk that Gracie will develop Copper Toxicosis (Accumulating).

Scientific Basis

Research studies for this variant have been based on dogs of other breeds. Not enough dogs with Gracie's breed have been studied to know whether or not this variant will increase Gracie's risk of developing this disease.

Impact on Breeding

Research into the clinical impact of this variant is ongoing. We recommend tracking this genetic result and incidence of Copper Toxicosis (Accumulating) in your breeding program and related dogs.

What is Copper Toxicosis (Accumulating)?

This condition affects the liver's ability to remove excess copper. Over time, copper can build up in the liver and damage liver cells. Both genetic and environmental factors play a role in how the condition develops.

When signs & symptoms develop in affected dogs

Signs typically develop in adults.

How vets diagnose this condition

Genetic testing, blood work, abdominal ultrasound, and surgical biopsy are all used to diagnose this condition.

How this condition is treated

Treatment includes a low copper diet and medical management to help bind excess copper. Antioxidant supplements may also be considered.

Actions to take if your dog is affected

- Talk to your vet about your dog's copper toxicosis result so you can discuss if dietary management or monitoring is indicated.
- Copper is an essential nutrient, but amounts can vary widely among commercial diets, so your vet may recommend a specific food or periodic testing to maintain safe levels.
- Many dogs with this result never develop clinical disease. Watch for signs that may indicate high copper levels, such as decreased appetite, vomiting, lethargy, or jaundice.
- Learn more about how the three variants for Copper Toxicosis are inherited and, if applicable, how results can be used in a breeding program here (<https://embarkvet.com/resources/embark-adds-copper-toxicosis-dna-test/>).

Genetic Diversity and Inbreeding

Coefficient of Inbreeding (COI)

Genetic Result: 18%

Our genetic COI measures the proportion of your dog’s genome (her genes) where the genes on the mother’s side are identical by descent to those on the father’s side. The higher your dog’s coefficient of inbreeding (the percentage), the more inbred your dog is.

Your Dog’s COI

This graph represents where your dog’s inbreeding levels fall on a scale compared to both dogs with a similar breed makeup to her (the blue bars) and all purebred dogs (the grey line).

Genetic Diversity and Inbreeding

More on the Science

Embark scientists, along with our research partners at Cornell University, have shown the impact of inbreeding on longevity and fertility and developed a state-of-the-art, peer-reviewed method for accurately measuring COI and predicting average COI in litters.

About Embark

Embark Veterinary is a canine genetics company offering research-grade genetic tests to pet owners and breeders. Every Embark test examines thousands of genetic markers, and provides results for over 250 genetic health conditions, breed identification, clinical tools, and more.

Embark is a research partner of the Cornell University College of Veterinary Medicine and collaborates with scientists and registries to accelerate genetic research in canine health. We make it easy for customers and vets to understand, share and make use of their dog's unique genetic profile to improve canine health and happiness.
